## ■ Parabolic Temperature Curve

To determine frequency stability, use parabolic curvature  
For example: What is the stability at 45°C

- 1) Change in  $T(^{\circ}\text{C}) = 45 - 25 = 20^{\circ}\text{C}$
- 2) Change in frequency =  $-0.04 \text{ PPM} \times (\Delta T)^2$   
 $= -0.04 \text{ PPM} \times (20)^2$   
 $= -16.0 \text{ PPM}$
